Q1

Project Proposal

20 marks

Present your capstone project proposal by explaining:• Project Title• Problem Statement• Objectives• Scope of the Project• Expected OutcomesDeliverables:1. Project Proposal Document2. PPT (5–10 slides)3. Initial Architecture Diagram

Your Answer

The capstone proposes outline AgriSphere AI, a digital ecosystem designed to connect farmers, buyers and service providers on a unified platform. It addresses supply chain management and the market access issues by integrating AI recommendation engine, smart notification and real-time analysis.

Q2 Existing System Analysis

20 marks

Analyze the existing system related to your project. Explain the limitations, challenges, and justify the need for your proposed solution. Include at least three limitations of the existing system.

Your Answer

Existing agricultural platform suffers from fragmented features, as IOT monitoring system focus strictly on sensor data without offering any sales channels, AI crop platforms lack transaction tools and e-commerce setups omit intelligence and service booking. Additionally key limitations include the absence of integrated agricultural service rentals, poor verification mechanisms to identify the trusted buyers or farmers.

Q3 Literature Survey

20 marks

Review at least five research papers related to your project. Prepare a comparison table showing the title, methodology, advantages, limitations, and research gap.

Your Answer

Patel & Singh (2022): Focused on IoT farm monitoring, but lacked a digital marketplace for selling produce.

Kumar et al. (2023): Provided ML crop yield predictions, bit omitted e-commerce and transaction tools.

Shama & Verma (2021): Built an agricultural marketplace but lacked AI recommendation engines and service rentals.

Das & Roy (2-24): Developed precision farming techniques, but failed to connect buyers and service providers on one platform.

Q4 System Design

20 marks

Present the design of your proposed system by including any three of the following:• System Architecture , Datasets

Your Answer

System Architecture: Next.js frontend, Node.js/Express.js backend, MongoDB, and integrations (Razorpay, Firebase).  
System flow: User onboarding - product/service discovery - cart & payment - delivery - feedback/analytics.  
Core Modules: User Management, Smart Marketplace. AI Recommendation engine, order/service management and admin analytics.
