

Class Activity-I/O Operations -CO5

CODE:

4. Count no of character and line in the given file.

```
import java.io.BufferedReader;
import java.io.FileReader;
import java.io.IOException;

public class Main {
    public static void main(String[] args) {

        String fileName = "source.txt";

        int characterCount = 0;
        int lineCount = 0;

        try {
            BufferedReader reader = new BufferedReader(
                new FileReader(fileName));

            String line;

            while ((line = reader.readLine()) != null) {
                lineCount++;

                // Count characters in each line
                characterCount += line.length();
            }

            reader.close();
```

```
System.out.println("Number of lines: " + lineCount);

System.out.println("Number of characters: " + characterCount);

} catch (IOException e) {

    System.out.println("Error: " + e.getMessage());

}

}

}
```

OUTPUT:

A screenshot of a terminal window with a dark background. The window has a title bar with standard icons (minimize, maximize, close) and a toolbar with icons for back, forward, search, and settings. The terminal displays two lines of output: "Number of lines: 3" and "Number of characters: 86".

```
Number of lines: 3
Number of characters: 86
```
